Predicted functional pathways associated with microbiome origin

Representative MetaCyc pathways grouped by biological function; grey cells are not significant at FDR q < 0.05

		Wild−like:As vs Wild:As	Lab−like:As vs Wild:As	Lab:Mm vs Wild:As	Lab−like:As vs Wild−like:As	Lab:Mm vs Wild−like:As	Lab:Mm vs Lab−like:As
Carbohydrate utilization	myo−inositol degradation I	**	***		***	***	***
	mannitol cycle		***	***	***	***	*
	L−rhamnose degradation I		***	***	**	***	**
	β−(1,4)−mannan degradation		***	***	***	***	**
Fermentation / SCFA metabolism	superpathway of glycerol degradation to 1,3−propanediol	***	***			***	***
	succinate fermentation to butanoate	**	***	*	***	***	
	L−lysine fermentation to acetate and butanoate		***		***	*	***
	glycolysis II (from fructose 6−phosphate)	***			***	***	
Amino−acid metabolism	L−methionine biosynthesis I	***		***	***	**	***
	L−lysine biosynthesis III	***			***	***	
	L−histidine degradation I	**	***	***		***	***
	L−citrulline biosynthesis		***	*	***	***	***
Nucleotide metabolism	superpathway of purine nucleotides de novo biosynthesis II	*	***	*	***	***	*
	superpathway of adenosine nucleotides de novo biosynthesis II	**	***		***	***	***
	guanosine ribonucleotides de novo biosynthesis	***			***	***	
	adenosine deoxyribonucleotides de novo biosynthesis II	**	***	**	***	***	*
Vitamin / cofactor metabolism	thiamine phosphate formation from pyrithiamine and oxythiamine (yeast)	**	***	***	*	*	
	pyridoxal 5'−phosphate biosynthesis I		**	***	***	***	***
	NAD salvage pathway III (to nicotinamide riboside)	*	***	***	***	***	
	heme b biosynthesis II (oxygen−independent)		***	**	***	***	***
Lipid / isoprenoid metabolism	stearate biosynthesis II (bacteria and plants)	**	*	***	***	***	***
	polyisoprenoid biosynthesis (E. coli)	***	***		***	***	***
	plasmalogen degradation	***	***	**		**	***
	lipid IVA biosynthesis (E. coli)	*		***	*	**	***
Cell envelope / surface structures	UDP−N−acetyl−D−glucosamine biosynthesis I	***	**	***	***	***	
	peptidoglycan biosynthesis II (staphylococci)	***	*	***	***	***	*
	CMP−pseudaminate biosynthesis		***	***	***	***	
	ADP−L−glycero−β−D−manno−heptose biosynthesis		***	*	***	**	*
Energy / central carbon metabolism	TCA cycle VI (Helicobacter)		***	***	***	***	
	TCA cycle V (2−oxoglutarate synthase)	**		***	*	***	***
	reductive TCA cycle I		***	***	***	***	***
	partial TCA cycle (obligate autotrophs)		***	***	***	***	**

−6

Positive coefficients = higher predicted abundance in the first−named group; negative coefficients = higher in the second−named
